Contact us today to learn more about how we can help bring your vision to life with our high-quality products and services.

The Process of Installing Exposed Aggregate Flooring:

Exposed aggregate flooring is a popular choice for both residential and commercial spaces in Townsville, thanks to its durability, low maintenance, and aesthetic appeal. This type of flooring is created by exposing the aggregate (small stones, pebbles, or shells) in the concrete mix, resulting in a textured and visually interesting surface. In this article, we will explore the process of installing exposed aggregate flooring and its various applications in Townsville.

1. Preparation:

- The first step in installing exposed aggregate flooring is preparing the subfloor. This may involve removing any existing flooring, levelling the surface, and applying a bonding agent to ensure proper adhesion.
- The next step is to create the concrete mix with the desired aggregate. The aggregate can be chosen based on colour, size, and texture preferences.

2. Pouring and Spreading:

- Once the concrete mix is ready, it is poured onto the prepared subfloor and spread evenly using a trowel or screed. The thickness of the concrete layer will depend on the desired finish and the specific requirements of the project.

3. Exposing the Aggregate:

- After the concrete has set slightly, the surface is washed with water to remove the thin layer of cement and expose the aggregate underneath. This can be done using a pressure washer or by scrubbing the surface with a brush.
- The level of exposure can be adjusted to achieve the desired look, whether it be a lightly exposed finish or a more dramatic reveal of the aggregate.

4. Sealing and Curing:

- Once the aggregate is exposed, the surface is sealed with a protective sealant to enhance its durability and resistance to stains and abrasion. This step also helps to bring out the natural colors and textures of the aggregate.
- The flooring is then left to cure for a period of time to ensure that it reaches its maximum strength and durability before it is ready for use.

Applications of Exposed Aggregate Flooring in Townsville

1. Driveways and Pathways:

- Exposed aggregate flooring is a popular choice for driveways and pathways in Townsville due to its durability and slip-resistant surface. It can withstand heavy traffic and harsh weather conditions while adding a decorative touch to outdoor spaces.

2. Pool Decks and Outdoor Areas:

- The textured surface of exposed aggregate flooring makes it an ideal choice for pool decks and outdoor entertaining areas. It provides a non-slip surface that is both practical and visually appealing.

3. Commercial Spaces:

- Exposed aggregate flooring is also commonly used in commercial spaces such as retail stores, restaurants, and offices in Townsville. Its durability and low maintenance requirements make it a practical choice for high-traffic areas.

Transform Your Space with Top-Notch Concrete Solutions - Contact Us Today!
